Fares Adel Atta Ahmed

SOC Analyst Tier 1 | Blue Team | Digital Forensics & Incident Response (DFIR)

Mansoura, Egypt | +20 100 479 3414 | faresaddell20@gmail.com

LinkedIn: https://linkedin.com/in/fares-adell2007 | GitHub: https://github.com/faresadell | Portfolio: https://faresadel.me/

PROFESSIONAL SUMMARY

Entry-level SOC Analyst candidate with hands-on training and practical project work in security monitoring, SIEM, alert triage, log analysis, threat detection, and incident investigation across Windows and Linux environments. Experienced with Splunk, Wazuh, Windows Event Logs, Sysmon, Wireshark, and Suricata through SOC labs and security projects, with additional training in digital forensics, network traffic analysis, malware analysis, and threat intelligence. Built ARGUS DFIR, a digital forensics and incident response platform with evidence integrity verification and chain-of-custody tracking, and a Suricata-based NIDS with 15 custom detection rules.

TECHNICAL SKILLS

SOC Operations: Security Monitoring, Alert Triage, Log Analysis, Threat Detection, Phishing Analysis, Incident Documentation

SIEM and Log Analysis: Splunk, Wazuh, Windows Event Logs, Sysmon, Log Correlation, Security Event Monitoring, Alert Analysis

Incident Response and Threat Intelligence: Incident Investigation, Incident Handling, IOC Analysis, Cyber Threat Intelligence, TheHive, MISP

Digital Forensics and Malware Analysis: Windows Artifacts, Timeline Analysis, Evidence Analysis, Chain of Custody, Malware Analysis Fundamentals

Network Security: TCP/IP, DNS, HTTP/HTTPS, Packet Analysis, Wireshark, Suricata, Nmap, Vulnerability Assessment

Security Tools and Scripting: Python, Scapy, Burp Suite, VirusTotal, Nessus, OpenVAS, Kali Linux

Operating Systems and Security Frameworks: Windows, Linux, MITRE ATT&CK, Cyber Kill Chain, EDR Concepts, Firewalls

EXPERIENCE

Cybersecurity Intern | Networkwalks

Remote | October 2026 – Present

- Build a hands-on lab environment with a Kali Linux attacker machine and Windows and Android target machines
- Perform footprinting and scanning with Maltego and Nmap and document findings in assessment reports
- Practice password cracking and exploitation techniques using John the Ripper and Metasploit
- Capture and analyze network traffic with Wireshark and write security reports on the findings (SOC track)

Cybersecurity Trainee — HCIA-Security | NTI and Huawei ICT Academy

Mansoura, Egypt | August 2026

- Completed HCIA-Security V4.0 training covering network security fundamentals, firewall and VPN technologies, and security operations

Cybersecurity Trainee — SOC and Incident Response | Digital Egypt Pioneers Initiative (DEPI)

Egypt | July 2026 – Present

- Analyze security events, logs, and system activity in SIEM-based environments to identify suspicious behavior and Indicators of Compromise (IOCs)
- Investigate incidents and perform Windows Event Log analysis as part of digital forensics practice
- Perform alert triage and threat analysis through practical SOC labs and guided exercises
- Apply security analysis skills in a capstone project built on realistic cybersecurity scenarios

Founder and Platform Lead | Null P0inter Academy

Egypt | January 2026 – Present

- Founded and lead a cybersecurity education platform with a six-person team, offering five learning tracks including SOC analysis and digital forensics
- Built platform features with Supabase and vanilla JavaScript, including student and admin dashboards, enrollment workflows, and authentication
- Developed an AI chatbot using the Groq API to answer student questions about learning tracks and the platform

PROJECTS

ARGUS DFIR — Digital Forensics and Incident Response Platform | Python, FastAPI, PostgreSQL, Containers

- Developed a DFIR platform for digital evidence management, forensic analysis workflows, and incident investigations
- Implemented cryptographic evidence integrity verification and chain-of-custody tracking
- Implemented role-based authentication and case-level access control
- Developed asynchronous forensic analysis workflows with job recovery and audit logging
- Implemented PostgreSQL-backed persistence and automated testing focused on security and reliability

Suricata Network Intrusion Detection System | Suricata

- Implemented a Suricata-based network intrusion detection system (NIDS) with 15 custom detection rules

SOC Home Lab — Security Monitoring and Incident Investigation | VirtualBox, Splunk, Windows, Sysmon, Ubuntu, Kali Linux

- Built a virtual SOC environment with Windows, Ubuntu, and Kali Linux machines
- Configured Splunk log collection and analysis for security monitoring and threat detection
- Investigated suspicious activity using Windows Event Logs and Sysmon telemetry
- Prepared the lab for attack-simulation investigations and incident report documentation

EDUCATION

Bachelor of Computers and Artificial Intelligence — Cybersecurity
Damietta National University, Egypt | September 2025 – Present

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- **SOC Analyst Path** — Hack The Box
- **SOC Analyst Learning Path** — LetsDefend
- **SOC Level 1** — TryHackMe
- **Certified Cyber Security Analyst (C3SA)** — CyberWarFare Labs
- **Certified Blue Team Fundamentals (BTF)** — CyberWarFare Labs
- **Blue Team Junior Analyst** — Centri
- **Malware Analysis Skill Path** — LetsDefend
- **Foundation Level Threat Intelligence Analyst** — arcX
- **Digital Forensics Investigator** — MaharaTech / ITI
- **CS50x: Introduction to Computer Science** — Harvard University
- **SANS SEC401** — Security Essentials (Book Self-Study)
- **SANS SEC403** — Book Self-Study
- **SANS SEC504** — Hacker Tools, Techniques, and Incident Handling (Book Self-Study)
- **eCIR** — Course Study Completed
- **Microsoft Certified Solutions Associate (MCSA)** — Course Study Completed
- **CompTIA CySA+** — Course Study Completed
- **CCNA: Enterprise Networking, Security, and Automation** — Cisco Networking Academy (NetAcad)
